Handa Agricultural High school was established as a local agricultural school in Chita country on April 1st, 1899 (Meiji 32) and prides itself on having it's own history and tradition over this 120 years. A lot of graduates have devoted themselves to local industry, or agriculture mainly in Chita Peninsula. Now the school has 4 courses; Agricultural Technology, Facility Gardening, Food Science and Home Economics.

It is Food that human essentially needs to live. Here, our school enables students to learn "agriculture" which produces our daily supplies. They can acquire how our society cycles; the harvest of crops, food processing systems, and food consumptions. Through all of these components, environmentally responsible recycle-based farming methods and also environment itself could be understood. Additionally, we take care of many types of living things including some animals, plants and even microorganisms during the whole lessons, which makes it possible to foster our students' perception for the values of lives firsthand. Our school is willing to make use of all the agricultural equipment we own in order to cultivate competent students who are supposed to show leaderships in the field of future agriculture.

The school was designated as, Aichi STEM High School , by Aichi Education Board over 3 years. To develop human resources in this new era. We are promoting classes about smart agriculture with ICT.

Through the life in the school, students learn not only agricultural skills but dignity of life through our teaching materials. "What is really important thing in life?" Think about it with your friends and teachers.

Following the school motto "Live strongly, Cheerfully and Fairly", students enjoy their school lives every day. I would be grateful if you could step in the school and see students' works.
